

TAPASWINI PRADHAN

QA Automation Engineer | Capgemini Technology Services, Bangalore
Bangalore | +91 7894004571 | tapaswiniautomationqa@gmail.com

PROFILE SUMMARY

QA Automation Engineer with 3.5+ years of experience in manual and automation testing across Insurance and Healthcare domains. Strong expertise in Java, Selenium WebDriver, TestNG, Cucumber (BDD), Rest Assured, Postman, SQL/MySQL, Jenkins, Maven, and Git. Experienced in designing and maintaining Hybrid, Data-Driven, BDD, and Page Object Model (POM) automation frameworks. Hands-on experience in UI automation, API testing, database validation, functional, regression, integration, smoke, sanity, UAT, cross-browser, and parallel testing. Experienced in integrating automated test suites with Jenkins CI/CD pipelines and working in Agile/Scrum environments. Proven track record of reducing regression testing cycle time and increasing overall test coverage through automation.

TECHNICAL SKILLS

Languages	Java
Automation Frameworks	Selenium WebDriver, TestNG, Cucumber (BDD), Rest Assured
Test Approaches	TDD, BDD, Hybrid, Data-Driven Testing (DDT), Page Object Model (POM)
API Testing	Postman, Rest Assured, API Automation, API Validation
CI/CD	Jenkins, Git, Maven
Databases	MySQL, SQL (Database Testing & Validation)
Test Management	JIRA, Agile/Scrum, STLC, SDLC, Bug Tracking
Testing Types	Functional, Regression, Smoke, Sanity, Integration, UAT, Cross-Browser, Parallel Execution

ORGANISATION

Currently working as **QA Automation Engineer** with **Capgemini Technology Services India Limited** from February 2023 to present under the payroll of **SSL INFOTECH**.

WORK EXPERIENCE

Project Sequence 2 | [September 2024 – Present]

Project Name: PolicyCore – Policy Administration System | **Domain:** Insurance

Role: Automation Engineer

Tools & Technologies Java, Selenium WebDriver, TestNG, BDD (Cucumber), SQL, Jenkins, Jira, Git, Agile, Cross-Browser Testing, Parallel Execution

Project Description:

PolicyCore is a core insurance platform that governs the complete policy lifecycle across multiple lines of business, including Life and Annuity. It supports key functions such as policy creation, underwriting, premium calculation, issuance, endorsements, renewals, and cancellations, and integrates with downstream systems like underwriting engines, billing platforms, and third-party risk-assessment data providers.

Roles & Responsibilities:

- Built a BDD automation framework from the ground up using Cucumber, Selenium WebDriver, and Java, enabling non-technical stakeholders to review and validate test scenarios in plain language
- Designed and executed manual test cases spanning functional, regression, integration, and cross-browser testing
- Developed and maintained automation scripts using Selenium WebDriver with Java and TestNG
- Implemented a hybrid, data-driven framework to support scalable and reusable test suites across modules
- Configured parallel test execution across multiple browsers to shorten overall test cycle time
- Validated premium calculation logic by testing rating factors such as age, policy term, coverage amount, and risk category
- Performed backend database validation using SQL to confirm policy data consistency and accuracy across integrated systems
- Set up CI/CD integration with Jenkins to automate scheduled and on-demand test runs
- Logged and managed defects through JIRA, working closely with developers throughout Agile sprint cycles
- Conducted API testing with Postman to validate backend service responses, status codes.

Project Sequence 1 | [February 2023 - August 2024]

Project Name: CareSphere – Patient Management & Hospital Information System (HIS) | **Domain:** Healthcare |

Role: Manual & Automation Engineer

Tools & Technologies: Java, Selenium WebDriver, TestNG, Data-Driven Testing (DDT), Hybrid Automation Framework, Rest Assured, Jira, Git, Jenkins, Agile, UI Testing, API Validation, Maven, Manual Testing

Project Description:

CareSphere is an enterprise-grade Hospital Information System (HIS) built to streamline hospital operations end to end — covering patient onboarding, appointment management, clinical consultations, electronic medical records (EMR), diagnostic lab workflows, and billing/insurance processing.

Roles & Responsibilities:

- Designed and executed end-to-end test scenarios for core clinical and administrative workflows, including patient registration, appointment booking, doctor consultation, EMR updates, lab order/report processing, billing, and insurance claims.
- Analyzed business requirements, user stories, and functional specifications to prepare comprehensive test scenarios and test cases.
- Performed manual testing across functional, integration, system, regression, smoke, sanity, exploratory, and UAT testing phases.
- Conducted end-to-end validation of healthcare workflows to ensure seamless data flow across patient, appointment, EMR, laboratory, billing, and insurance modules.
- Performed database validation using SQL queries to verify the accuracy and integrity of patient, appointment, billing, and insurance-related data.
- Identified, logged, tracked, and managed defects throughout the complete defect lifecycle using JIRA.
- Performed re-testing and regression testing after defect fixes to ensure issues were resolved without impacting existing functionality.
- Participated in UAT by supporting business users, validating real-world business scenarios, and documenting feedback and defects.
- Built and maintained Selenium and Java-based automated regression test suites, reducing the regression testing cycle time by **40%**.
- Applied Page Object Model (POM) and data-driven testing principles to develop scalable, reusable, and low-maintenance automation scripts.
- Developed and maintained a Hybrid Automation Framework combining reusable components and structured test execution practices.
- Automated critical end-to-end workflows, including patient registration, appointment scheduling, insurance eligibility verification, and billing processes.
- Conducted API testing and validation for insurance eligibility checks and claim processing services using Rest Assured.
- Integrated automated test suites with Jenkins CI/CD pipelines to enable continuous testing and faster feedback on every build.
- Executed automated smoke and regression suites after deployments to validate application stability and release readiness.
- Increased overall test coverage by **50%** through structured test design and the implementation of the hybrid automation framework.
- Collaborated closely with developers, business analysts, and product owners within an Agile/Scrum environment to ensure timely delivery of high-quality releases.

EDUCATION

MCA | 2021 – 2023

College of Engineering Bhubaneswar (COEB), Bhubaneswar, Odisha
